Based on an article which appeared in Life magazine July 4, 1949

SUMMARY: Captioned photographs are used in portraying the exploration, settlement, and development of the West during the 19th century. Depicts the primitive civilization of Indians living west of the Mississippi River; portrays the hardships of early fur trappers penetrating unexplored regions and of the emigrant settlers traveling west by wagon train; explains that the discovery of gold in 1849 contributed greatly to the rapid settlement and development of the West. Shows that steamships facilitated inland water transportation and depicts the completion of the first railroad which connected the East and the West.

Razor blades. [Motion picture] Paul Sharits. Released by Time-Life Films, 1972.

26 min. sd. color. 16 mm.

Must be run on two projectors simultaneously.

SUMMARY: The theme of the film is the cosmic, dynamic unity of opposites, the order of disorder, the sense of circularity—paradox as fundamental as fact-reality. In this film there is also a sense of life-cycle, a mundane activity slashed open, revealing the positive-negative dynamics of sexuality; birth, growth, extension, clashes of levels of reality; the other side of a death-filled vision of life—the razor used to slash a wrist becomes medicine (the life-giving scalpel), ends become beginnings.

Structural and geometrical isomers. [Motion picture] see

Structure and stereochemistry: Structural and geometrical isomers.

Structure and stereochemistry: Conformation in ring compounds. [Motion picture] Harper & Row, Publishers, 1972. Made by Bay State Film Productions.

Approx. 4 min. si. color. super 8 mm.

Loop film in cartridge. Film notes on cartridge case.

CREDITS: Authors, Joseph Casanova, Harold Goldwhite.

SUMMARY: Uses framework models to demonstrate the destabilizing influence of H-H non-bonded interaction and ring strain. Depicts nuclear positions, internuclear distances, and eclipsing interactions. Uses cyclobutane to examine interplay between the same molecular features. Shows the effect of ring puckering on minimizing molecular energy by relief of eclipsing interaction.

Approx. 4 min. si. color. super 8 mm.

Loop film in cartridge. Film notes on cartridge case.

CREDITS: Authors, Joseph Casanova, Harold Goldwhite.

SUMMARY: The chair conformation of cyclohexane is rationalized, beginning with a hypothetical planar model. Identifies axial and equatorial hydrogens. Internuclear distances are illustrated for chair, boat, and twist-boat conformations, permitting the viewer to conclude the relative stability of the several conformers.

Approx. 4 min. si. color. super 8 mm.

Loop film in cartridge. Film notes on cartridge case.

CREDITS: Authors, Joseph Casanova, Harold Goldwhite.

SUMMARY: Depicts the problems involved when complex molecules are represented by two-dimensional drawings as compared with the representation which is achieved in three-dimensional molecular models. Uses propane and n-octane for examples of complex molecules. Illustrates the value of the condensed structural formula.

I. Molecules—Models. 2. Chemistry—Notation. 3. Propane. 4. Octanes. I. Harper & Row, Publishers. II. Title: Drawing structures, part 2. [Motion picture]

Approx. 4 min. si. color. super 8 mm.

Loop film in cartridge. Film notes on cartridge case.

CREDITS: Authors, Joseph Casanova, Harold Goldwhite.

SUMMARY: Shows interconversion of the several conformations of cyclohexane by examining potential energy versus conformation. Identifies the most stable of the conformants in a graph of their potential energy minima. Includes consideration of barriers to interconversion.
